User Manual for ESSC Project

Table of Contents

---

1. Introduction

Welcome to the ESSC Project User Manual. This manual is designed to guide users through the functionality and features of the ESSC platform. It provides step-by-step instructions for using each module effectively and troubleshooting common issues.

Purpose of the ESSC Platform

The ESSC platform will help foster collaboration among key stakeholders, including the Government of Timor-Leste (GoTL), oil and gas operators, and local and international suppliers/vendors, to efficiently seek and provide goods and services within the oil and gas industry.

For oil and gas operators, the platform streamlines identifying potential vendors or suppliers capable of meeting industry standards. It ensures thorough background screening and profiling to verify suitability and compliance.

For stakeholders, the platform offers a straightforward approach to identifying and assessing gaps in the technical and financial capabilities of local suppliers/vendors relative to industry requirements. It enables tracking and monitoring of development progress among participating suppliers while supporting capacity-building initiatives to help them meet industry standards. For local and international suppliers, the platform provides easy access to critical information about procurement opportunities in the oil and gas sector. It enhances their ability to participate actively and contribute to the industry's growth.

Audience

This manual is intended for all users of the ESSC platform, including administrators, suppliers, and other stakeholders.

---

2. Overview of Modules

The ESSC platform is composed of the following modules:

- **Supplier Management:** This module hosts the business registration system, facilitating local and international SMEs and corporate enterprises, including consultants, to register, become verified, and qualify for participation in oil and gas industry business opportunities.
- **Goods and Services:** This module serves as an e-commerce center, enabling suppliers to publish product and service catalogs for assessment by oil operators.
- **E-procurement and Contract Management:** This module will facilitate the bidding process, encompassing procurement planning, expressions of interest, announcements (requests for proposals, tenders), bid evaluation, and contract awarding. Additionally, it will enable contract management, allowing ANP and oil operators to track contract statuses, including those of subcontractors.
- **Information Center:** This module functions as a content management system, serving as an online information hub to deliver updates on news, activities, publications, marketing materials, photo galleries, posts, and advertisements.

3. Module Descriptions and User Guides

3.1 E-procurement Module- Supplier

16 projects posted

Member since July 12, 2024

Bidding start date: **October 30, 2024**

Bidding end date: **December 30, 2024**

Procurement Activity

Interests: 112 suppliers

Bidding: 18 suppliers

Contract: 0 suppliers

Description:

A leading oil and gas company is looking for qualified contractors with extensive experience in pipeline inspection and maintenance. The project involves the routine inspection, assessment, and maintenance of critical pipeline infrastructure across multiple states in North America. Contractors will be responsible for conducting thorough inspections to identify potential risks, such as corrosion, leaks, or structural weaknesses, using advanced inspection technologies including smart pigs, ultrasonic testing, and drone surveillance. In addition to inspections, the scope includes performing necessary maintenance tasks to ensure the pipelines' integrity and compliance with safety and environmental regulations. Contractors should be familiar with both above-ground and underground pipeline systems and have a proven track record of working in diverse geographical conditions, from remote rural areas to densely populated urban regions.

Prerequisites or Submission requirements

- Requires bidding process
- Available to start immediately
- Must meet the project description
- Company with xyz capacity preferable an enterprise or joint venture
- Detail reporting

Bid requirements

- Company registration document
- Licenses and Permits

Additional information

Contractors should demonstrate strong project management capabilities and a proven track record in diverse geographical conditions. All work must adhere to the highest industry standards for safety and quality.
